

Halden Distribution Ltd. — monthly patch and vulnerability report

Reporting month: _____ · **Prepared by:** IT · **Date:** _____ **Distribution:** Managing Director, department heads · **Source data:** the prioritised work list and the verification report for the month (file names below)

Template. Every figure in this report must come from a real scan and a real verification run, with the source file named beside it. Where a figure has not been measured yet, write **"not measured"** — never an estimate. This is a home-lab artefact for a fictional company.

1. One-paragraph summary

(Two or three sentences. What changed this month, what is the biggest open risk, and what we are asking for. Example structure: "We closed X of the Y urgent findings; Z remain open with reasons. The largest remaining risk is We need ... from the business.")

2. Findings by tier

Tier	Open at start of month	Closed this month	Open at end of month	Overdue (past target)
P0 — Emergency (3 days)	not measured	not measured	not measured	not measured
P1 — Critical (7 days)	not measured	not measured	not measured	not measured
P2 — High (30 days)	not measured	not measured	not measured	not measured
P3 — Medium (60 days)	not measured	not measured	not measured	not measured
P4 — Low (next cycle)	not measured	not measured	not measured	not measured
Total	not measured	not measured	not measured	not measured

Source: reports/prioritized-work-list-<date>.csv (work list), evidence/public/p05-verify-closure-result.csv (closure).

3. Exploited-vulnerability (KEV) exposure

Metric	This month	Source
Findings that are known-exploited (KEV)	not measured	work list, in_kev column
KEV findings on internet-exposed assets	not measured	work list, exposure = internet
KEV findings overdue	not measured	work list, overdue column

4. Remediation performance

Metric	Target	This month	Source
P0 remediated within 3 days	100% of P0	not measured	verification report
P1 remediated within 7 days	≥ 95% of P1	not measured	verification report
Mean time to remediate (MTTR), all urgent findings	<i>informational</i>	not measured (needs two real scans)	derived from the before/after work lists
Patch compliance, workstations, within 14 days	≥ 95%	not measured	WSUS console export
Patch compliance, servers, within the window	≥ 95%	not measured	WSUS console export

5. Patch ring performance

Ring	Devices	Within deadline	Failed or rolled back	Notes
Ring0-Pilot	not measured	not measured	not measured	
Ring1-Broad	not measured	not measured	not measured	
Ring2-Servers	not measured	not measured	not measured	

6. Exceptions and accepted risks

Metric	Count	Source
Live exceptions	not measured	exception register
Expiring in the next 30 days	not measured	exception register
Expired without review	not measured	exception register

7. What we are asking of management

#	Ask	From whom	Decision needed by
1	(e.g. approve the Saturday maintenance window for <system>)	Department head	
2	(e.g. approve replacement budget for the end-of-life firewall)	Finance / Management	
3	(e.g. sign the risk acceptance for <finding>)	Finance Director	

8. Actions carried forward

#	Action	Owner	Due	Status
1				

How this report is produced: the figures come from `scripts/14-weekly-report.sh`, which reads the prioritizer's work list and the closure verification output. Nothing in it is typed in by hand except the summary and the asks. If a number is not in the source file, it does not go in the report.

Halden Distribution Ltd. — home-lab portfolio artifact (fictional company, real configurations). Generated from p05-monthly-report-template.md on 2026-10-02.
