

Halden Distribution Ltd. — vendor security advisory log

Document: P5-LOG-001 · **Owner:** IT · **Review:** monthly, with the vulnerability report **Purpose:** to record the vendor security advisories we have reviewed, whether they affect us, what we did, and when. This is the "coordinate with vendors" part of the job: the scanner cannot see a firewall firmware advisory or a hardware limitation, so a human tracks them.

Home-lab artefact. The table is a **template with worked-example rows clearly marked**. Nothing in it has been reviewed or actioned in the lab; it shows the shape the log takes once it is in use.

How to use this log

- 1. Subscribe to the advisory feeds for everything Halden depends on (firewall, operating systems, backup software, the service-desk stack).
- 1. For each advisory that arrives, record it here: vendor, product, advisory id, whether the affected version is in use, the action, and the date.
- 1. If the advisory maps to a scanner finding, link the ticket. If the scanner *cannot* see it (hardware, firmware, a feature disabled at the port), the log is the only record that it was considered.
- 1. An advisory that affects an end-of-life device becomes an ask in the monthly report: replace, isolate, or accept with a control — not "keep patching forever".

Log

Date reviewed	Vendor	Product / component	Advisory reference	Affects us?	Action taken	Ticket / change ref	Reviewed by
—	—	<i>(no live entries yet — nothing has been reviewed in the lab)</i>	—	—	—	—	—
2026-10-02 <i>(worked example)</i>	OPNsense	Firewall (FW01)	Vendor security advisory for the current release	Yes — the installed release predates the advisory	Back up configuration, then update FW01 in the Saturday window; re-check interfaces, VPN and rules	<i>(example: CHG-2026-008)</i>	<i>(example: IT)</i>
2026-10-02	Microsoft	Windows Server 2025	Monthly vendor	Yes — applies to	Servers ring approval after	<i>(example)</i>	<i>(example: IT)</i>

Date reviewed	Vendor	Product / component	Advisory reference	Affects us?	Action taken	Ticket / change ref	Reviewed by
<i>(worked example)</i>			update release	DC01, DC02, FS01	the pilot gate; domain controllers in DC02-then-DC01 order		
2026-10-02 <i>(worked example)</i>	Distribution maintainer	Ubuntu Server 24.04	Security update notice for the web/SSH stack	Yes — applies to LNX01, OPS01, SIEM01, BKP01	Ansible patching cycle; unattended security updates cover the gap between cycles	<i>(example)</i>	<i>(example: IT)</i>

Reporting

The monthly vulnerability report states, from this log: advisories reviewed, advisories affecting Halden, and any end-of-life device that keeps appearing. Those are facts from the log, not estimates.

Note: this log belongs to a home-lab project for a fictional company. No entry here represents a real vendor relationship or a real advisory response.
