

Halden Distribution Ltd. — monthly security summary

Month: _____ · **Prepared by:** IT · **To:** Managing Director and management team **Feeds:** P10 governance KPI dashboard · **Companion:** `p07-exec-brief.md`

Status: template, empty by design. Every figure below is filled from the SIEM's real output at the end of the month. "Not measured" is used where a figure was not captured, and it is never replaced with an estimate (AGENTS.md R2).

1. Headline

(2-3 sentences: was the month quiet or not, and the one thing management should know. To be written after the month's figures exist.)

2. Alerts and incidents

Metric	This month	Previous month	Trend
Total alerts			
SEV1 incidents			
SEV2 incidents			
SEV3 / tickets			
Alerts that were true positives (share of High+)			
Mean time from first evidence to alert			
Mean time from alert to containment			

All figures come from Wazuh and the ticket system. Until a month has actually run, this table stays blank.

3. Notable detections

(A short list of interesting detections and what happened. Even a quiet month usually teaches something — for example a legitimate admin action that looked suspicious, or a rule that stayed quiet.)

Date	Rule	What it was	Outcome

4. Availability

Service	Uptime	Notable outages
Domain controllers (DC01/DC02)		

Service	Uptime	Notable outages
File services (FS01)		
Service desk (GLPI)		
SIEM dashboard		
Backups (heartbeat green)		

5. Changes and actions

Item	Status	Note
Detection tuning changes (see <code>../docs/tuning-log.md</code>)		
Tabletop / incident improvement actions (P10)		
Open risks		

6. What management should decide or note

(Anything needing a decision: a policy change, a spend, an accepted risk. To be filled as needed.)

Halden Distribution Ltd. is a fictional company for a home-lab portfolio project. This template is real work; the month's figures are filled only from real lab output, never invented.
