

Halden Distribution Ltd. — Tabletop exercise report

Exercise: "Friday 16:30 — the files are renamed" · **Pack:** p07-tabletop-exercise.md **Date of exercise:** (not run yet) · **Facilitator:** IT · **Attendees:** (to be recorded) **Duration:** (to be recorded)

Status: template, deliberately incomplete. The findings, timings and action items below are empty on purpose. They are filled in only from what actually happened during the exercise — a tabletop report with invented findings would defeat the purpose (AGENTS.md R2). The exercise has **not** been run yet.

1. Executive summary

(3-5 sentences after the run: what was exercised, the strongest finding, the weakest, and how many improvement actions came out. Nothing here yet.)

2. What went well

(To be filled from the run. Note the decisions that were made cleanly and on time.)

#	What worked	Why it mattered

3. Gaps found

(To be filled from the run. Note anything that slowed the response, was unclear, or had no owner.)

#	Gap	Impact if real	Owner

4. Decision timings (measured during the exercise)

Milestone	Target	Actual	Note
Incident declared	first 10 min	(not measured)	
Severity set	first 10 min	(not measured)	
First staff communication	within 30 min	(not measured)	
Back-up decision made	within 30 min	(not measured)	

5. Privacy inject — the answer we gave

(What was the honest answer to "are you watching my screen?" and did it match the monitoring policy? To be filled from the run.)

6. Action items (tracked in P10)

#	Action	Owner	Due	Priority	Status
					open

Until this exercise has been run, this table stays empty. Empty is honest; invented actions are not.

7. Follow-up

Item	Owner	Date
Update the IR plan with the findings	IT	
Update the affected playbooks	IT	
Report back to management	IT	
Schedule the next exercise	IT	

8. Facilitator's closing note

(One short paragraph after the run: the single change that would most improve the next response.)

Halden Distribution Ltd. is a fictional company for a home-lab portfolio project. The exercise, participants and findings are simulated; the process and the resulting actions are real work.
