

Halden Distribution Ltd. — IT service catalogue

Purpose: the single list of what IT provides, who can ask for it, who approves it and how long it should take. **Owner:** IT (Muhammad Ibrahim Akmal) · **Approvers:** department heads and the Managing Director · **Review:** quarterly, plus whenever a service is added or removed.

How to read it: "Approval" is the person whose decision it is to grant the service — access to business data is a business decision, not an IT decision. "Target" is the time from a complete, approved request to the outcome, measured in **business hours** (Mon–Fri 08:00–18:00).

Service	Request type	Approval	Target
New starter setup	Form (HR)	HR + hiring manager	Ready the business day before the start date
Leaver / offboarding	Form (HR)	HR	Within 1 hour of the HR notification
Software installation	Form	Line manager (+ IT if the title is not approved)	2 business days
VPN access	Form	Line manager	1 business day
Shared folder access	Form	Data owner (department head)	1 business day
Hardware request	Form	Line manager + budget holder	Quote in 3 business days
Incident (something is broken)	Portal / email / phone	—	Per the priority SLA
Report a phishing email	Form / email	—	Acknowledge in 1 hour
Restore a file or folder	Form	—	Self-service immediate; request 2 business days

Notes:

- **Approvals are recorded on the ticket.** An approval given verbally is not an approval; the ticket holds the decision so the audit trail exists.
- **Access to business data** (folder access, and the new-starter access list) is approved by the **data owner**, not by IT. IT implements; the business owns the decision.
- This machine-readable version of the catalogue is `configs/glpi-service-catalogue.json`; the human-readable version is this document. They must be kept in step.

Service detail

New starter setup. HR submits the form with name, department, title, start date, office and manager. The ticket routes to IT with a task that references the automated joiner process (P2) so nothing is created by hand. Access is granted by department role through the group model; the new starter receives credentials by the agreed secure channel, never by email in clear text.

Leaver / offboarding. HR submits the form; IT disables the account, removes access, records the equipment returned and hands over business data to the manager. The target is one hour because an open account after someone leaves is an access risk, not an administrative delay.

Software installation. Approved titles install on request. Anything not on the approved list goes to IT for a review first (licence, security and supportability), which is why the approval column names IT as a second approver.

VPN access. For approved remote or travelling staff only. Access is MFA-protected (P6); a request without a manager's approval is not granted.

Shared folder access. Granted through the role-group model (P1); no individual is ever placed on a folder. Read-only access across departments needs the owning department head's approval.

Hardware request. A quote is produced within three business days; purchase then follows the normal budget approval. IT does not approve spending.

Incident. A fault, not a request: routed by priority per the SLA policy. Users are encouraged to use the portal, but email and phone remain valid channels so nothing is missed.

Report a phishing email. Always triaged by L2 (Systems), never left in the L1 queue, and acknowledged within an hour so the reporter knows it was seen.

Restore a file or folder. Self-service through Previous Versions where possible; otherwise a restore request routed to the backup service (P8).

Business approval

The catalogue is a commitment from IT to the business and from the business to IT (approvers must respond promptly). Please confirm your department's services and targets below; unsigned rows are reviewed at the next quarterly review.

Department	Approver name	Role	Date	Signature / approval
Management		Managing Director		
Finance		Finance Director		
HR		HR Director		
Sales		Sales Director		
Operations / Warehouse		Operations Director		
IT		IT Manager		

Status: designed for the lab; **the approval column is unsigned** until the department-head review actually happens. It is deliberately left blank rather than pre-filled. Halden Distribution Ltd. is the fictional company used for this portfolio.
